

River Loop Security

Cybersecurity solutions
for the Internet-of-Things

IoT is now omnipresent in our homes and pockets, but many of these devices have unknown cybersecurity risks.

River Loop Security helps **design more secure systems**, test the security of devices and deployments, and effectively respond to cyber attacks so that we can live in a more secure connected world.

Security is Critical for 20+ Billion Connected Devices

Advances in technology place connected devices everywhere from our pockets to kitchens to offices. While these devices provide conveniences, they also create a new targets and introduce risks.

Without appropriate protection, the 20 billion or more connected devices online may compromise our homes, personal information, and much more.

River Loop Security brings **leading technical solutions** to architect secure IoT, test for cybersecurity vulnerabilities, and prepare for and respond to attacks.

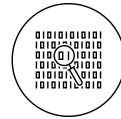

The challenge is only getting tougher

States are starting to regulate IoT security, with more standards on the way

Rapid consumer adoption of technologies comes with increased demands

Attack surfaces are growing while attackers are becoming more savvy

About River Loop Security

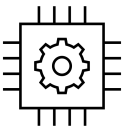

We provide security solutions to clients ranging from startups to global infrastructure providers. Our solutions are based on industry leading research, tested standards, and strong engineering principles.

We have a team of the brightest information security experts who are up-to-date on the latest threats and research. Our team has experience designing, analyzing, and securing thousands of IoT and embedded devices.

Services Include

Architecture & Design

Comprehensive design, from circuit board to server architecture, ensures strong and compliant cybersecurity practices from start to finish.

Security Testing

Subject systems to real-world hacking by experts who uncover and help remediate vulnerabilities

Incident Response

Prepare for and respond to IoT cybersecurity issues to rapidly contain and recover from incidents.
